

ERP OPTIMIZATION

Manufacturing & ERP Services from Revolution Group

Why Optimize?

Your manufacturing environment is dynamic. Shouldn't your ERP system be dynamic too? Improving and refining your ERP environment can bring new insight and energize your system, your people and your operations.

What to Expect

During optimization, a Revolution Group ERP Strategy Consultant will spend 3-4 days at your facility, meeting with key personnel from each functional area. The process is guided by a multi-point checklist geared to benchmark your organization against best-in-class ERP systems. The process identifies gaps and pain points while aligning your organization's expectations with current industry standards for ERP.

Our consultant will present recommendations along with a proposed project roadmap that prioritizes the highest value opportunities aligned with your business objectives. You can then decide if, when and how to move forward.

ASSESS

Examine the way ERP is currently utilized in your environment and analyze how your systems are aligned with your business objectives.

SUMMARIZE

Perform a gap analysis and create a report that outlines current vs. optimum ERP utilization, with estimated costs, risks and benefits.

PLAN

Choose new or alternative procedures that will increase the effectiveness of your ERP system. Execute practical, near-term system changes.

ALIGN

Deploy project related process tracks and modules, conduct training and any other services required to ensure your system is optimized.
